

Problem-solving Process for Two People and a Stone

You will need a friend and a stone.

1. State your question and share it with your friend.

2. Choose a stone

3. Find two faces of the stone:

Top and bottom

Front and back

Yin and Yang

4. Study the first face of the stone:

the top

the front

the yin

5. Find four features of the stone that remind you of something else:

a mountain

a river

the face of a friend

the moon at home

two people walking up a path

6. Show these features to your friend

Your friend must be able to see them, too.

7. Explain to your friend what connection each of these features has to the question you are considering.

Certainly there will be connections.

8. Repeat these four steps with the other face of the stone:

the bottom

the back

the yang.

Now, you can see a solution, can't you?
